

## Exercise 11 - Get the Titles!

You are given an array of objects that represent books with an author and a title that looks like this:

```
const books = [
  {
    title: 'Book',
    author: 'Name'
  },
  {
    title: 'Book2',
    author: 'Name2'
  }
]
```

Your job is to write a function that takes the array and returns an array of titles:

```
getTheTitles(books) // ['Book', 'Book2']
```

### Hints

- You should use a built-in javascript method to do most of the work for you!
